 Basic Path. Basic Path Scénario : Traduction de l'audio

SCENARIOS

Description du scénario : Permet de traduire un enregistrement audio d'une langue vers la langue sélectionnée et de traiter un flux audio ou un enregistrement audio en choisissant la langue de provenance ainsi que le choix du flux de l'audio (un anglophone ne peut pas avoir une prononciation d'une autre langue.)

Les parties prenantes et intérêts : Utilisateur

Préconditions: Enregistrement audio et gestion des paramètres (on a besoin d'un flux audio pour faire une traduction et on peut télécharger des langues depuis gestion de paramètre)

Post Conditions: envoyer le message audio

(voir structured specification pour une description du (des) scénario(s) alternatif(s))

1. L'utilisateur décide de traduire un flux d'audio
2. Option de traduction
3. L'utilisateur décide de traduire un flux d'audio automatiquement
4. Option de traduction Automatique
5. L'utilisateur choisit la voix de sortie
6. Option de traduction Automatique
7. L'utilisateur choisit le médium de sortie
8. Option de traduction Automatique
9. L'utilisateur choisit le délai de sortie
10. Option de traduction Automatique
11. L'utilisateur choisit la langue cible
12. Option de traduction Automatique
13. L'utilisateur parle
14. PolyVersion traduit et émet la traduction

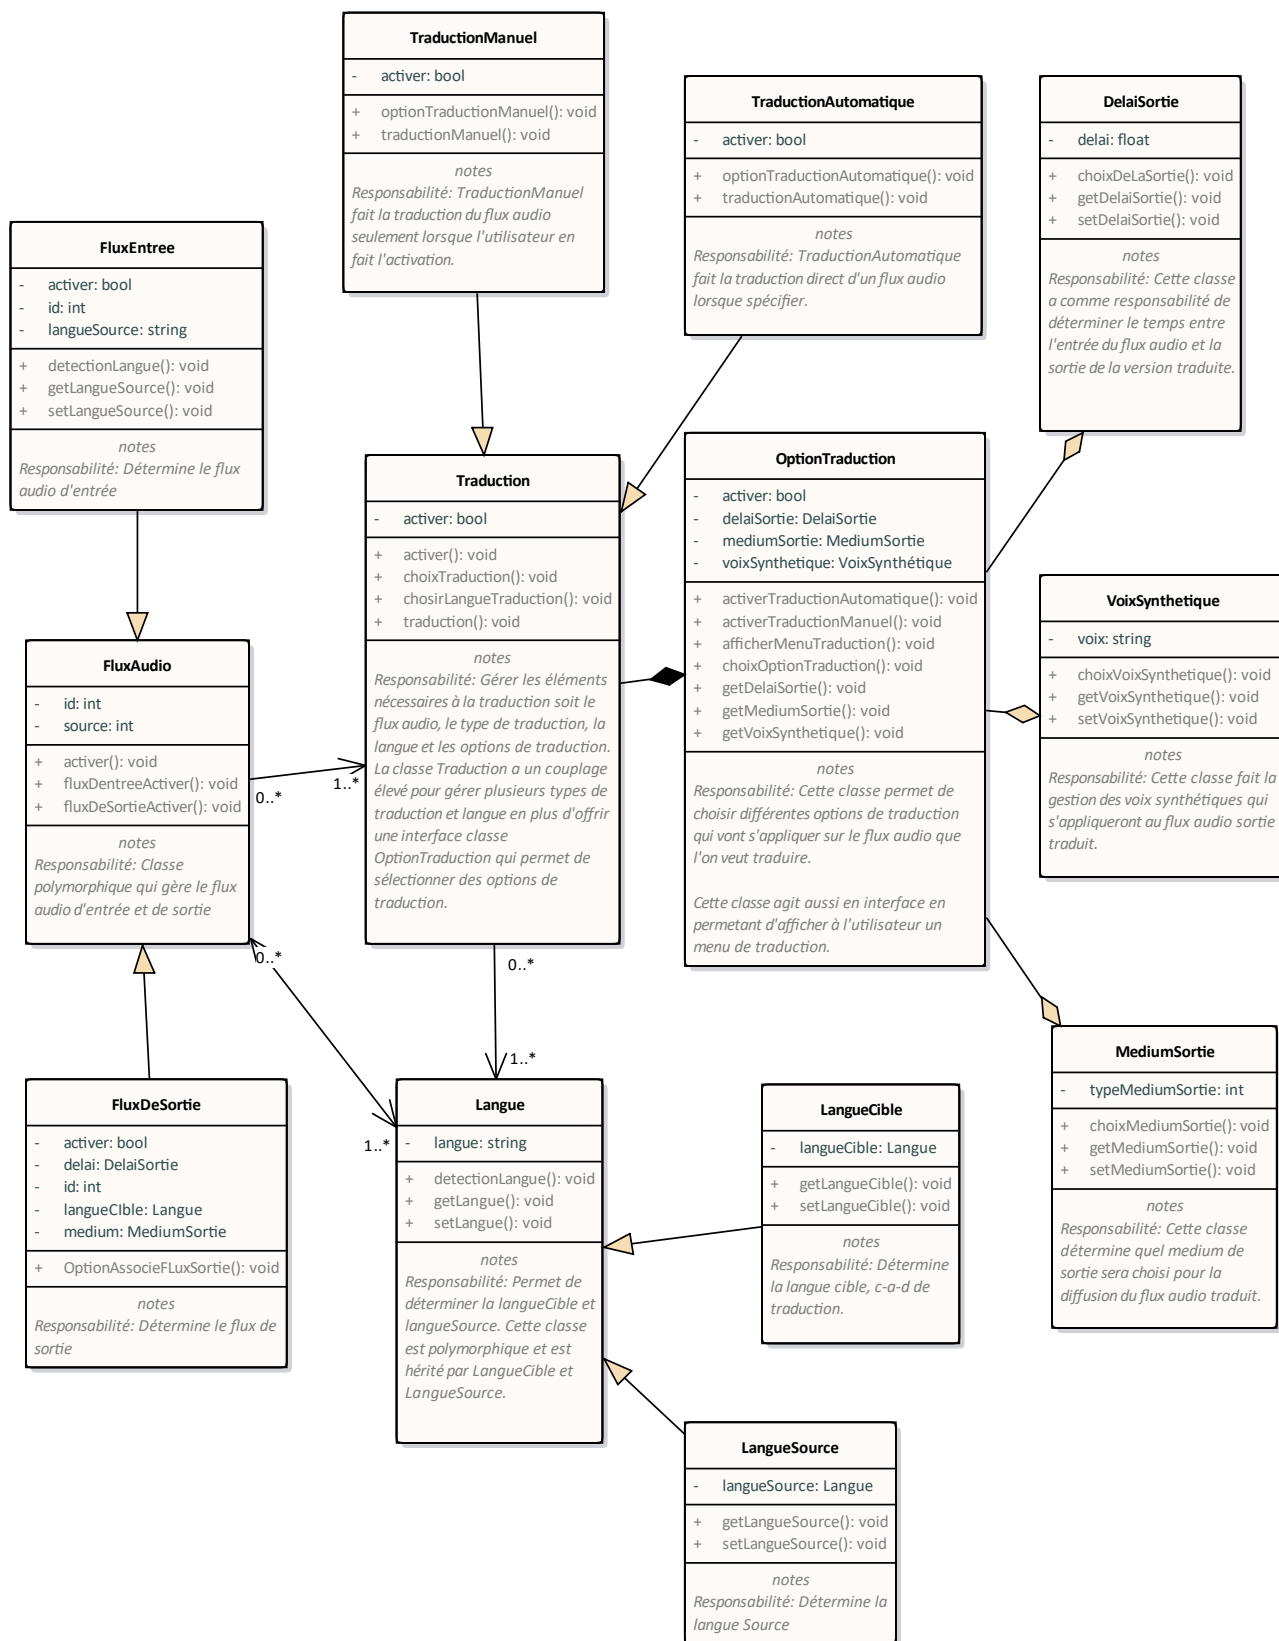

Figure 8: Diagramme de classe

DelaiSortie

Class in package 'Diagramme de classes'

Responsabilité: Cette classe a comme responsabilité de déterminer le temps entre l'entrée du flux audio et la sortie de la version traduite.

DelaiSortie
Version 1.0 Phase 1.0 Proposed
paclab created on 2019-02-12. Last modified 2019-02-18

INCOMING STRUCTURAL RELATIONSHIPS	
⇒ Aggregation from OptionTraduction to DelaiSortie	[Direction is 'Source -> Destination'.]
ATTRIBUTES	
◆ delai : float Private	[Is static True. Containment is Not Specified.]
OPERATIONS	
◆ choixDeLaSortie () : void Public	[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]
◆ getDelaiSortie () : void Public	[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]
◆ setDelaiSortie () : void Public	[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

FluxAudio

Class in package 'Diagramme de classes'

Responsabilité: Classe polymorphique qui gère le flux audio d'entrée et de sortie

FluxAudio
Version 1.0 Phase 1.0 Proposed
paclab created on 2019-02-12. Last modified 2019-02-18

INCOMING STRUCTURAL RELATIONSHIPS	
⇒ Generalization from FluxEntree to FluxAudio	[Direction is 'Source -> Destination'.]
⇒ Generalization from FluxDeSortie to FluxAudio	[Direction is 'Source -> Destination'.]
ATTRIBUTES	
◆ id : int Private	[Is static True. Containment is Not Specified.]

ATTRIBUTES
 source : int Private

[Is static True. Containment is Not Specified.]

ASSOCIATIONS
 Association (direction: Bi-Directional)

 Source: Public (Class) FluxAudio
 Cardinality: [0..*]

 Target: Public (Class) Langue
 Cardinality: [1..*]

 Association (direction: Source -> Destination)

 Source: Public (Class) FluxAudio
 Cardinality: [0..*]

 Target: Public (Class) Traduction
 Cardinality: [1..*]
OPERATIONS
 activer () : void Public

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

 fluxDentreeActiver () : void Public

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

 fluxDeSortieActiver () : void Public

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

FluxDeSortie*Class in package 'Diagramme de classes'*

Responsabilité: Détermine le flux de sortie

FluxDeSortie
 Version 1.0 Phase 1.0 Proposed
 paclab created on 2019-02-12. Last modified 2019-02-18
 Extends FluxAudio

OUTGOING STRUCTURAL RELATIONSHIPS
 Generalization from FluxDeSortie to FluxAudio

[Direction is 'Source -> Destination'.]

ATTRIBUTES
 activer : bool Private

[Is static True. Containment is Not Specified.]

ATTRIBUTES	
 <code>delai : DelaiSortie Private</code>	[Is static True. Containment is Not Specified.]
 <code>id : int Private</code>	[Is static True. Containment is Not Specified.]

OPERATIONS	
 <code>OptionAssocieFLuxSortie () : void Public</code>	[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

FluxEntree

Class in package 'Diagramme de classes'

Responsabilité: Détermine le flux audio d'entrée

FluxEntree
Version 1.0 Phase 1.0 Proposed
paclab created on 2019-02-12. Last modified 2019-02-18
Extends FluxAudio

OUTGOING STRUCTURAL RELATIONSHIPS	
 Generalization from FluxEntree to FluxAudio	[Direction is 'Source -> Destination'.]
ATTRIBUTES	
 <code>activer : bool Private</code>	[Is static True. Containment is Not Specified.]
 <code>id : int Private</code>	[Is static True. Containment is Not Specified.]
 <code>langueSource : string Private</code>	[Is static True. Containment is Not Specified.]
OPERATIONS	

OPERATIONS
 detectionLangue () : void Public [Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]
 getLangueSource () : void Public [Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]
 setLangueSource () : void Public [Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

Langue

Class in package 'Diagramme de classes'

Responsabilité: Permet de déterminer la langueCible et langueSource. Cette classe est polymorphique et est hérité par LangueCible et LangueSource.

Langue
Version 1.0 Phase 1.0 Proposed
paclab created on 2019-02-12. Last modified 2019-02-18

INCOMING STRUCTURAL RELATIONSHIPS
 Generalization from LangueCible to Langue [Direction is 'Source -> Destination'.]
 Generalization from LangueSource to Langue [Direction is 'Source -> Destination'.]

ATTRIBUTES
 langue : string Private [Is static True. Containment is Not Specified.]

ASSOCIATIONS
 Association (direction: Bi-Directional) Source: Public (Class) FluxAudio Cardinality: [0..*] Target: Public (Class) Langue Cardinality: [1..*]
 Association (direction: Source -> Destination) Source: Public (Class) Traduction Cardinality: [0..*] Target: Public (Class) Langue Cardinality: [1..*]

OPERATIONS
 detectionLangue () : void Public

OPERATIONS	
	[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]
◆ getLangue () : void Public	[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]
◆ setLangue () : void Public	[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

LangueCible

Class in package 'Diagramme de classes'

Responsabilité: Détermine la langue cible, c-a-d de traduction.

LangueCible
Version 1.0 Phase 1.0 Proposed
paclab created on 2019-02-12. Last modified 2019-02-18
Extends Langue

OUTGOING STRUCTURAL RELATIONSHIPS	
 Generalization from LangueCible to Langue	[Direction is 'Source -> Destination'.]

ATTRIBUTES	
◆ langueCible : Langue Private	[Is static True. Containment is Not Specified.]

OPERATIONS	
◆ getLangueCible () : void Public	[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]
◆ setLangueCible () : void Public	[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

LangueSource

Class in package 'Diagramme de classes'

Responsabilité: Détermine la langue Source

LangueSource
Version 1.0 Phase 1.0 Proposed
paclab created on 2019-02-12. Last modified 2019-02-18
Extends Langue

OUTGOING STRUCTURAL RELATIONSHIPS

← Generalization from LangueSource to Langue

[Direction is 'Source -> Destination'.]

ATTRIBUTES

◆ langueSource : Langue Private

[Is static True. Containment is Not Specified.]

OPERATIONS

◆ getLangueSource () : void Public

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

◆ setLangueSource () : void Public

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

MediumSortie

Class in package 'Diagramme de classes'

Responsabilité: Cette classe détermine quel medium de sortie sera choisi pour la diffusion du flux audio traduit.

MediumSortie

Version 1.0 Phase 1.0 Proposed

paclab created on 2019-02-12. Last modified 2019-02-18

INCOMING STRUCTURAL RELATIONSHIPS

⇒ Aggregation from OptionTraduction to MediumSortie

[Direction is 'Source -> Destination'.]

ATTRIBUTES

◆ typeMediumSortie : int Private

[Is static True. Containment is Not Specified.]

OPERATIONS

◆ choixMediumSortie () : void Public

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

◆ getMediumSortie () : void Public

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

◆ setMediumSortie () : void Public

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

OptionTraduction

Class in package 'Diagramme de classes'

Responsabilité: Cette classe permet de choisir différentes options de traduction qui vont s'appliquer sur le flux audio que l'on veut traduire.

Cette classe agit aussi en interface en permettant d'afficher à l'utilisateur un menu de traduction.

OptionTraduction
Version 1.0 Phase 1.0 Proposed
paclab created on 2019-02-12. Last modified 2019-02-18

OUTGOING STRUCTURAL RELATIONSHIPS	
 Aggregation from OptionTraduction to VoixSynthetique	[Direction is 'Source -> Destination'.]
 Aggregation from OptionTraduction to DelaiSortie	[Direction is 'Source -> Destination'.]
 Aggregation from OptionTraduction to MediumSortie	[Direction is 'Source -> Destination'.]
INCOMING STRUCTURAL RELATIONSHIPS	
 Aggregation from Traduction to OptionTraduction	[Direction is 'Source -> Destination'.]
ATTRIBUTES	
 activer : bool Private	[Is static True. Containment is Not Specified.]
 delaiSortie : DelaiSortie Private	[Is static True. Containment is Not Specified.]
 mediumSortie : MediumSortie Private	[Is static True. Containment is Not Specified.]
 voixSynthetique : VoixSynthétique Private	[Is static True. Containment is Not Specified.]
OPERATIONS	
 activerTraductionAutomatique () : void Public	[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

OPERATIONS	
 activerTraductionManuel () : void Public [Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]	
 afficherMenuTraduction () : void Public [Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]	
 choixOptionTraduction () : void Public [Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]	
 getDelaiSortie () : void Public [Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]	
 getMediumSortie () : void Public [Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]	
 getVoixSynthetique () : void Public [Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]	

Traduction

Class in package 'Diagramme de classes'

Responsabilité: Gérer les éléments nécessaires à la traduction soit le flux audio, le type de traduction, la langue et les options de traduction. La classe Traduction a un couplage élevé pour gérer plusieurs types de traduction et langue en plus d'offrir une interface classe OptionTraduction qui permet de sélectionner des options de traduction.

Traduction
Version 1.0 Phase 1.0 Proposed
paclab created on 2019-02-12. Last modified 2019-02-18

OUTGOING STRUCTURAL RELATIONSHIPS	
 Aggregation from Traduction to OptionTraduction [Direction is 'Source -> Destination'.]	
INCOMING STRUCTURAL RELATIONSHIPS	
 Generalization from TraductionManuel to Traduction [Direction is 'Source -> Destination'.]	
 Generalization from TraductionAutomatique to Traduction [Direction is 'Source -> Destination'.]	
ATTRIBUTES	
 activer : bool Private [Is static True. Containment is Not Specified.]	

ATTRIBUTES**ASSOCIATIONS**

 Association (direction: Source -> Destination)

Source: Public (Class) Traduction
Cardinality: [0..*]

Target: Public (Class) Langue
Cardinality: [1..*]

 Association (direction: Source -> Destination)

Source: Public (Class) FluxAudio

 traduction () : void Public

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

TraductionAutomatique

Class in package 'Diagramme de classes'

Responsabilité: TraductionAutomatique fait la traduction direct d'un flux audio lorsque spécifier.

TraductionAutomatique
Version 1.0 Phase 1.0 Proposed
paclab created on 2019-02-12. Last modified 2019-02-18
Extends Traduction

OUTGOING STRUCTURAL RELATIONSHIPS

 Generalization from TraductionAutomatique to Traduction

[Direction is 'Source -> Destination'.]

ATTRIBUTES

 activer : bool Private

[Is static True. Containment is Not Specified.]

OPERATIONS

💎 optionTraductionAutomatique () : void Public
 [Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

💎 traductionAutomatique () : void Public
 [Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

TraductionManuel

Class in package 'Diagramme de classes'

Responsabilité: TraductionManuel fait la traduction du flux audio seulement lorsque l'utilisateur en fait l'activation.

TraductionManuel
 Version 1.0 Phase 1.0 Proposed
 paclab created on 2019-02-12. Last modified 2019-02-18
 Extends Traduction

OUTGOING STRUCTURAL RELATIONSHIPS

↔ Generalization from TraductionManuel to Traduction
 [Direction is 'Source -> Destination'.]

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

setLangueSource () : void Public

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

Langue

Class in package 'Conception'

Langue
 Version 1.0 Phase 1.0 Proposed
 paclab created on 2019-02-13. Last modified 2019-02-12

INCOMING STRUCTURAL RELATIONSHIPS

⇒ Generalization from LangueSource to Langue

[Direction is 'Source -> Destination'.]

⇒ Generalization from LangueCible to Langue

[Direction is 'Source -> Destination'.]

ATTRIBUTES

langue : string Private

[Is static True. Containment is Not Specified.]

ASSOCIATIONS
 Association (direction: Bi-Directional)

Source: Public (Class) FluxAudio
Cardinality: [0..*]

Target: Public (Class) Langue
Cardinality: [1..*]

 Association (direction: Source -> Destination)

Source: Public (Class) Traduction
Cardinality: [0..*]

Target: Public (Class) Langue
Cardinality: [1..*]

OPERATIONS

getLangue () : void Public

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

setLangue () : void Public

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

LangueCible

Class in package 'Conception'

LangueCible
Version 1.0 Phase 1.0 Proposed
paclab created on 2019-02-13. Last modified 2019-02-12
Extends Langue

OUTGOING STRUCTURAL RELATIONSHIPS
 Generalization from LangueCible to Langue

[Direction is 'Source -> Destination'.]

OPERATIONS

getLangueCible () : void Public

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

setLangueCible () : void Public

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

LangueSource

Class in package 'Conception'

LangueSource
Version 1.0 Phase 1.0 Proposed

paclab created on 2019-02-13. Last modified 2019-02-12

Extends Langue

OUTGOING STRUCTURAL RELATIONSHIPS
 Generalization from LangueSource to Langue

[Direction is 'Source -> Destination'.]

OPERATIONS
 getLangueSource () : void Public

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

 setLangueSource () : void Public

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

MediumSortie*Class in package 'Conception'*

MediumSortie

Version 1.0 Phase 1.0 Proposed

paclab created on 2019-02-13. Last modified 2019-02-12

INCOMING STRUCTURAL RELATIONSHIPS
 Aggregation from OptionTraduction to MediumSortie

[Direction is 'Source -> Destination'.]

ATTRIBUTES
 typeMediumSortie : int Private

[Is static True. Containment is Not Specified.]

OPERATIONS
 choixMediumSortie () : void Public

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

 getMediumSortie () : void Public

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

 setMediumSortie () : void Public

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

OptionTraduction

Class in package 'Conception'

OptionTraduction
Version 1.0 Phase 1.0 Proposed
paclab created on 2019-02-13. Last modified 2019-02-12

OUTGOING STRUCTURAL RELATIONSHIPS

← Aggregation from OptionTraduction to DelaiSortie

[Direction is 'Source -> Destination'.]

← Aggregation from OptionTraduction to MediumSortie

[Direction is 'Source -> Destination'.]

← Aggregation from OptionTraduction to VoixSynthetique

[Direction is 'Source -> Destination'.]

INCOMING STRUCTURAL RELATIONSHIPS

→ Aggregation from Traduction to OptionTraduction

[Direction is 'Source -> Destination'.]

ATTRIBUTES

♦ activer : bool Private

[Is static True. Containment is Not Specified.]

OPERATIONS

♦ activerTraductionAutomatique () : void Public

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

♦ afficherMenuTraduction () : void Public

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

♦ choixOptionTraduction () : void Public

[Is static False. Is abstract False. Is return array False. Is query False. Is synchronized False.]

Traduction
